RECEIPT.										EXPENDITURE.									

KING EDWARD'S SCHOOLS.

CHAPLAIN'S REPORT, 1882.

To the Right Worshipful the PRESIDENT, the
Worshipful the TREASURER, and the
GOVERNORS of King Edward's Schools.

MY LORDS AND GENTLEMEN,

For the twenty-seventh time, I have the honour to present to you my Annual Report on "the state and condition of King Edward's Schools, and such occurrences therein as may be worthy of notice."

In the course of the year 1882 there were—

ADMITTED.						DISCHARGED.					
Boys	85	Boys	69
Girls	62	Girls	61
					<hr/>						<hr/>
Total	147	Total	130

There were remaining in the Schools on the 31st December, 216 boys, and 220 girls; making a total of 436, in addition to three pupil teachers in the Boys' School, and four pupil teachers in the Girls' School.

The enlargement of the School premises both in London and at Witley, which I mentioned in my last Report as being in progress, has been completed, and the new buildings are now partially occupied. This has enabled you to increase the number of inmates by ten in each School, and you will probably be in a position to make a further addition to them during the present year. The new buildings have been judiciously planned, and well executed, and I hope will be found to add to the comfort of the inmates, and the convenience of the Executive.

The inmates discharged during the last year were disposed of as follows:—

BOYS.										
To the Army	10
Outfitted to various Situations	55
Sent home at request of Friends	2
Died	2

69

It will be seen that we have lost two boys by death. One died of peritonitis, after a very short illness: the other, I regret to say, met his death by a very sad accident. In attempting to slide down the balusters, on his way from the dormitories in the early morning, he over-balanced himself, and fell from a height of over 20 feet upon the stone pavement, fractured his skull, and was killed on the spot. I was with him within a very few minutes of the occurrence, and sent off at once for a local medical practitioner. I thought I detected a slight pulsation when I reached him, but the doctor, on his arrival, assured me that his death must have

been instantaneous. An inquest was held on the body, and the verdict was "Accidental death," accompanied by a recommendation of the jury, that some iron knobs should be placed on the rails, to prevent the dangerous practice of sliding down—a recommendation which, it is needless to say, was at once adopted, and the work has been executed.

For the first time, in my experience of 27 years, we have sent no boys to the Royal Navy during the twelvemonth. For some reason or other, the boys seem to have lost their taste for the Naval service. One boy only volunteered, of the required age and height, and he was rejected by the Medical Officer of the Training Ship at Portsmouth.

I extremely regret that this should be so, as I regard the Royal Navy as the very best provision for the boys. It must, in justice to them, be added, that the Naval Standard is extremely high as to physical requirements, and no boys are admitted to the Service under the age of 15. It often happens, that just as the boys are becoming qualified by age, and would possibly volunteer, situations are found for them by their friends, who prefer to have them nearer home.

GIRLS.

To Situations, as Domestic Servants	58
Sent home at request of Friends	2
Sent home, unfitted for industrial employment through					
bodily weakness	1

 61

The Boys' School was examined by the Government Inspector on July 13, and the Girls' on July 6. I tran-

scribe for your information the two Reports, as well as those of the Diocesan Inspectors in Religious Knowledge, for Winchester and Rochester.

COPY OF INSPECTOR'S REPORT OF SCHOOLS FOR 1882.

“ SIR,

I have the honour to report, that at my inspection of King Edward's Girls' School, St. George's Road, Southwark, on Thursday, the 6th instant, I was much struck with the excellent tone which pervades the whole School, and with the honest, pure, and generally intelligent faces of the girls. Reading is very creditable in all the classes. Handwriting is remarkably bold and good. Spelling is apparently rather weak this year, in the highest Standards; sums are very fairly done throughout, and where failures took place, they arose from carelessness rather than from want of teaching. I was well satisfied with the ready and thoughtful answers obtained in *vivâ voce* Scripture and Religious Knowledge; and also in Geography. Singing is tuneful and good. Needlework, and General Industrial Training are carefully and well carried out.

The examination of King Edward's Boys' School at Witley, on Thursday, the 13th instant, was a great pleasure to me; and although the erection of new buildings has somewhat interfered with a complete supervision of all the School-work by the Head-master, the results were generally good, and in the Upper School, the boys have rarely passed a better *vivâ voce* examination; their Religious Knowledge, mental arithmetic, history, geography, and grammar, shewing proofs of good and careful teaching.

Reading is somewhat poor throughout the School; for, whilst expression and intelligence are not wanting, articulation requires improvement; and there are some very bad mannerisms, which should be eradicated. The Lower School is hardly so good in sums or spelling as I should like, and there is hardly such smartness and attention as I should like to see.

The boys' singing is very good, and their brass band is doing very creditably, whilst the introduction of stringed instruments cannot fail materially to promote the refinement and musical taste of the whole schools.

Military drill should improve, now that an efficient officer has been appointed.

The order in School, and the cheerful, manly appearance of the boys out of School, leave nothing to be desired in that respect.

I am, Sir,

Your obedient Servant,

WYNDHAM HOLGATE,

The REV. E. RUDGE,

H. M. Inspector.

King Edward's School, Witley,

Godalming."

Written work	—	—	Excellent.
Discipline and tone		Excellent.	

GENERAL REMARKS.

Both Teachers and Scholars appear much interested in the Religious Lessons, and a great deal of spirit and earnestness is thrown into the teaching. The examination, consequently, was very satisfactory. In the second and third divisions the Scripture subjects have been carefully prepared, and the Church Catechism well taught and explained. The historical facts of the Bible were creditably known by the children of the lowest group, and many of them could quite enter into the spirit and meaning of its teaching, though some had not much perception of this.

The excellent order and behaviour of the girls throughout the School should not go unnoticed.

E. S. GARNIER,

Assistant Diocesan Inspector.

At the annual examination of the Pupil Teachers in Religious Knowledge, conducted by the Diocesan Inspector for Winchester, all of ours succeeded in obtaining places in the first class, and had prizes awarded to them. I again, as in last year, allowed twelve boys to compete for prizes in Religious Knowledge, with all the schools in the Surrey portion of the Diocese. One boy, ALFRED MILLER, who gained the "Sir James Tyler Prize" last year, obtained the

Bishop's prize. This is the third time our School has carried off what may be considered the Diocesan "Blue Ribbon." Nine obtained places in the first class, and received prizes; two were placed in the second class, and one only failed to secure a class.

The prizes were distributed by the Bishop himself at Guildford, and the boys were hospitably entertained at tea by the ladies of the place.

The boys elected ARTHUR SIMMONDS to be "Truscott Medalist" for the year.

One hundred and ninety-four rewards were given by the Committee to former inmates, who attended with good characters from their employers. Of these, forty-seven boys and forty girls were rewarded for the first time: fifty-one boys and seventeen girls for the second time; and twenty-two boys and seventeen girls for the third and last time.

The conduct of the children in both schools has been generally satisfactory, and their health fairly good. Towards the close of the year, some of the boys suffered from sore throat and herpetic eruptions; but under the skilful treatment of the Medical Officers of Bethlehem Hospital they speedily recovered, and no deaths resulted from this cause.

I continue to receive valuable and zealous co-operation from the officers and servants of both Schools, and am quite satisfied with the results of another year's work.

It only remains for me, in concluding this, the twenty-seventh year of my labours, to thank the Governors for the constant support, kindness, and confidence with which they have honoured me, and to assure them of my undiminished interest in the welfare of the Schools.

I have the honour to be,

My Lords and Gentlemen,

Your faithful Servant,

EDWARD RUDGE,

Chaplain and Superintendent.

REGULATIONS.

1. The Boys are in two divisions, which attend the Shops, &c., and the Schools, on alternate days, receiving on an average $15\frac{1}{2}$ hours Instruction in School, and 24 hours Industrial Employment per week.

2. Half Holiday every Saturday, from 12 a.m., when boys are to bathe.

3. Choir practice, and Brass Band, on alternate days, from 12 to 12.45 p.m.

4. Drill for School Boys in summer from 5 to 5.45; and in winter from 12 to 12.45, when weather will permit.

The whole School to Drill twice-a-week during the summer months, after supper.

* Half-an-hour later in Winter Months.

No. 10.

1882.

LONDON.

DAILY ROUTINE.

Hours of Rising.

Six o'clock in the summer months, and not later than 7 o'clock in the winter months.

After private prayer in each dormitory, washing, dressing, &c.

On Week Days.

The girls selected for employment in the Laundry and Kitchen, and in Household Work, to be engaged in their particular occupations, and the rest in making beds, and sweeping and cleaning the dormitories and other apartments.

From 8 to 9 o'clock.—Prayers, breakfast, and recreation.

Girls selected for particular employments to be at their respective occupations from 9 to 1 o'clock, as the Matron shall direct; and on alternate days at School during the same hours.

From 1 to 2 o'clock.—Dinner and recreation.

Girls selected for particular employments to be at their respective occupations, and the rest at needlework, from 2 till 5 o'clock, and in occupation from 5 till 6 o'clock, as the Matron shall direct.

From 6 to 7 $\frac{3}{4}$ o'clock.—Supper and recreation.

From 7 $\frac{3}{4}$ to 8 o'clock.—Prayer.

8 o'clock.—Bed-time.

On Saturdays.

No school to be kept, either in the morning or afternoon. The girls on this day to be engaged in cleaning the establishment, assorting and distributing clean linen, using the bath, and in such other occupations as the Matron shall direct. The recreation of the inmates to be, when the weather will permit, in the airing grounds, and at other times in the day-rooms, which are to be provided with suitable books for amusement and instruction.

On Sundays.

Until 8 o'clock.—The inmates to be occupied in *making beds, changing linen, and delivering up all that is dirty*, and preparing for the proper spending of the day.

From 8 to 10 o'clock.—Breakfast, and walking in the airing grounds, when the weather will permit.

From 10 to 11 o'clock.—In school rooms, reading the Lessons for the day, repeating Catechism, and answering questions on scriptural subjects.

From 11 to 1 o'clock.—In Chapel for Morning Service and Sermon.

1 o'clock.—Dinner.

From 1 $\frac{1}{2}$ to 3 o'clock.—In the day rooms, and airing courts.

3 o'clock.—Afternoon Service in Chapel and Sermon.

7 o'clock.—Supper.

8 o'clock.—Bed-time.

In Hospital, 31st Dec.,									
1882	81	116	197	22	29	51	103	145	248
Totals	198	282	480	24	30	54	222	312	534

From the above Report it will be seen that the numbers have been very nearly the same as those of last year: thus, in 1881, there were 124 male admissions, and 164 female admissions; and in 1882, the numbers were 119 and 170 respectively. In 1881, 41 men and 100 women were discharged cured; and in 1882, I have to report 42 men and 84 women discharged well, giving a per centage of 35·1 among the males, and 43·5 among the females, on the admissions. The deaths this year have been one less than those of last year, but these include two cases which were brought to the Asylum in a dying state. I shall refer later to the death-table, and point out the nature of the cases who died.

It will appear from the first table that a large number of patients have been discharged for special reasons, and it may be well to explain, that the Committee have been anxious in every way to extend the benefits of this Hospital; and rather than refuse to admit cases, which appeared at first sight to the Resident Physician to be incurable, they have often granted admission for a period of three months, to allow the Medical Officers to verify their judgment, and to assist the friends. By this means, many have had time to arrange for the permanent care of their friends, with more time and comfort than they would have otherwise.

The object of the Hospital being to confer the greatest amount of charity, and not merely to enlarge the roll of cures, I am convinced the most good is done by this means.

By admitting such cases, the death list too has been

increased, for several have died during their probationary admission.

It is well known that we select, as carefully as we can, from among the numerous applicants for admission, almost always by first seeing the patients' friends, next, giving a preliminary form of application with instructions, and only then granting a full form for admission if the case appears suitable, both socially and medically.

But there are cases in which the medical interest is such that other considerations have been put on one side, and I have specially to thank the Treasurer and Committee for their kindness in always admitting such cases. They fully appreciate that Bethlem is a school for the study of mental disorders, and are willing to assist in every way most liberally. If, then, the death list shows that incurable cases, such as those suffering from General Paralysis of the insane, have been admitted, they have been admitted for study, in the hope that some day we may gain means for arresting or relieving this fatal disease.

On the other hand, cases from time to time appear before the Committee, which are specially deserving, but which, either from incurability, or from the duration of the disease, would hardly fall within the rules, and in such cases the benefits of the Charity are often extended. And this consideration of doing the most good to the most deserving has been acted upon especially carefully this year, so that there should be no ground for saying, that by admitting some paying patients, other deserving cases have been excluded.

Again, for the fifth time I have the pleasure of reporting a year without a suicide or fatal accident within the hospital; as may be seen in Table No. 15, one quarter of the admissions were reported to be suicidal; and though this gives hardly a fair idea, it is sufficient to show that the immunity from accidents has been, in part at least, due to the precautions taken.

One inquest was held on a patient who was admitted on September 1st, 1882, and died on September 6th, 1882; in this case the death was simply due to exhaustion, following maniacal excitement. An inquest was thought desirable by the Coroner, because the patient had been so short a time in the Hospital.

A verdict of death from natural causes was returned; but the newspaper reporters published a sensational report, entitled "Forcibly feeding a lunatic." It is well there should be freedom of reporting; but it seems to be a pity that the public, already far too ready to accept reports of cruelty to the insane, should have sensational and exaggerated representations made to them.

One of the most common symptoms among those suffering from acute insanity is the refusal of food; and if we are to save and cure our patients, they must be fed.

Some Superintendents say they never use the stomach-pump, or the nose tube; I can believe them, but I question whether they may not be sacrificing something to this hobby of non-feeding. I feel with forcible feeding as I do about restraint—that I should never use it as a mere saver of

trouble; but if patients are likely to suffer by being held down, or if they would suffer from not taking enough food, or if they would be more harassed by spoon-feeding than by the use of the stomach-pump or nasal tube, I should, in the one case restrain, and in the other feed. Forcible feeding has not, in my experience, the dangers or evils which have been credited to it. I have never seen a case in which food was sent into the air-passages, instead of into the stomach. I have not found patients lose any self-respect after feeding; and though there is some danger of getting persons into the habit of being fed, I have myself never found this a danger which could not be avoided.

I make it a rule, that if patients are not taking as much food as I think they should, and if they are losing flesh, to have them fed artificially for a time; by this means one can judge if the wasting is due to physical disease or simple starvation.

The Commissioners in Lunacy have visited Bethlem twice, and the Convalescent Establishment at Witley once, and I submit their Reports, which are favourable. One constant difficulty here is, to keep the patients, especially the more destructive men, properly clothed. The patients admitted here may be taken to belong to a class unable to pay for their maintenance, even at a cheap private Asylum, and the friends of such patients find it very difficult to supply them with decent clothes, if they are destructive or dirty. Many a patient will destroy a pound's worth of clothes a-day, if not controlled; and if the hospital supplies such destructive patients with clothes during the acute stages of the disease, these clothes must be cheap and strong.

As long as we receive so many very violent cases, we cannot be tidy in our refractory wards, and I am not sure that, personally, I want to see absolute neatness.

If patients who are acutely maniacal are allowed freedom, they will be constantly dirty, and their clothes destroyed or untidy; but at the same time, their appetites will be good, and their progress through the disease more satisfactory, to my mind, than if either controlled by attendants or medicine.

I have only good to report of the Convalescent Establishment at Witley.

This year it was partially opened in March, a few lady patients then going down; more went down early in April, and by the middle of the month patients were there from both male and female sides of the Hospital.

The Establishment was kept open till November 21st, when the last patient returned.

In all, 42 male and 84 female patients, making a total of 126, spent from two to six weeks there each.

Though somewhat costly, I am convinced that the establishment at Witley is of immense service, in fully re-establishing the health of patients recovering from acute mental disorder. And I am convinced fewer relapses occur with patients discharged after a stay at Witley, than with those who go direct from the Hospital to their homes.

Although I think thus highly of Witley, I do not think that Bethlem, removed to the Surrey hills, would be of the

same value, either to the patients, or to the Medical profession, as it ought to be in London.

From Table 12 it will be seen, that of the patients admitted during the past year, 162 (out of 279) were from London and its neighbourhood; thus it will be seen, that considerably more than half were near their friends, and near their old associations. Some change may at times be good for persons suffering from mental disorder, but I do not believe City people are benefitted by enforced country life.

By being in London, shopping, visits to places of amusement, places of worship and the like, are easily and constantly permitted, and with good effect; and I have greater confidence in letting patients go *en parole* in a city, than I should in a wild district.

One great advantage which the establishment at Witley has over Bethlem is in the cooking and serving of meals. Witley is more home-like, and much more satisfactory. Although we are improving in London, it is slowly, the whole machine being so much larger, and more unwieldy than the smaller one.

Still, as I said, progress has been made, and weekly we have soup, fish, joints, meat-pies, puddings, &c.; the soups have been varied from week to week, and the fish supply from Grimsby is very satisfactory.

In some of the galleries, the method of serving the meals only after the patients are all seated, and allowing them to help themselves to ale, vegetables, &c., has been adopted.

I strongly object to serve patients of the educated classes with rations, or portions. Appetites vary in persons at times, and so should the allowance given vary too.

The amusements provided for the patients have been as varied, and more numerous than in any year since I have been Superintendent.

The relationship of entertainments to insanity seems to puzzle many who have not special knowledge; but Superintendents look to entertainments, not only for the good done at the time, but for the good service they do in rousing patients to prepare for them; and they are good as leaving memories which take the patient's attention from himself.

I trust that we shall still increase and improve our entertainments, and I should be very glad if I saw any plan by which a good recreation-hall could be built.

We have an admirable site above or in the place of the old laundry, but the cost at present cannot I fear be entertained. I should like, next winter, to try weekly or fortnightly popular lectures, which in London might be easily obtained for a moderate sum; but here, again, the question of a suitable hall is raised. Our dances have been held during the winter months weekly, and this year we have generally managed to have a few from the outer world present.

As I have often said and always felt, insanity can neither be understood properly or fairly dealt with, till the sane people know more about and lose their dread of it; till, in fact, they look upon it as a disease, not a sin.

Another year has passed, and we are no nearer solving the problem of occupation for the middle-class insane. I look upon the airing-court passing of time as a necessity, but only half a good. The patients have so much fresh air, and some play rackets, lawn tennis, ball, &c., but the dull and moody ones loaf their time away, and grow more deluded or more demented. Very few cases of simple insanity, if treated early, are incurable; but to treat them properly requires constant personal attention, and an Asylum Medical Staff is never large enough to do much beyond supervise.

Again, I have to thank many private friends for their assistance in giving private theatrical performances; and my colleague, Dr. Woon, has been indefatigable in arranging and managing most perfectly these modes of treatment. We had a large Christmas-tree, which was filled with presents given by Governors and friends, and every patient received not only Christmas cards, but Christmas presents. We have had a constant attendance of students, and also of physicians, interested in the study of mental diseases.

And this year, beside the ordinary morning round of the wards with the students, I have paid two weekly visits in the afternoons, specially for those wishing to study. Many foreigners have joined in the rounds; and this constant visitation by strangers not only gives confidence to the patients, but also assists the Medical Staff by bringing fresh ideas to bear on the subjects.

The usual classes from Guy's and St. Thomas's attended during the summer.

Our Resident Students continue to be a real benefit to the Hospital, the patients, and the Staff; and I cannot speak too highly of the men who have been selected.

Leave of absence has been granted, as on former years, to large numbers of patients, and to these I owe not a few recoveries.

Patients, after acute mental disorder, have often a tendency to settle into an apathetic state, which, if not treated, will pass into chronic weak-mindedness.

Whenever I can trust a patient at home, I send him on leave; and many a patient, only slowly, recovers and re-establishes his home relationships when at home. In sending such convalescent patients home some risk is run, but the result has proved that it is worth while to run it.

The event of the year has been the opening the Hospital to a certain number of paying patients on the male side.

It was not till July, 1882, that permission was granted by the Charity Commissioners, and since then 18 have been admitted, at a payment of £2 2s. 0*d.* a-week.

Very many more applications have been made, but from one cause or another, they have not resulted in the patients' reception.

We have had a very excited set of patients admitted under this class; patients who are not very profitable, I should fear.

I believe, if in the future any modification is made, it will be to reduce the sum received, or rather to make it a variable sum ; thus, some patients are dear at £2 2s. a-week, whereas others would be cheap at £1 1s. I have had to discharge several socially fit cases, who could have paid £1 1s., and would have been of some use in the wards as well.

So far, we have not had to increase our staff of attendants.

It is in contemplation to subdivide the refractory male gallery, as has been done on the female side ; this, I believe, will be a gain, for doubtless, the aggregation of bad cases is not for the good of the patients, or for the good discipline of the attendants.

It is a very trying thing for attendants to have a large number of refractory patients together, and leads to roughness, which is hard to check.

One gallery, No. 2, on the female side, has been carpeted, the boards polished, and generally refurnished, and now compares favourably with any ward in the Hospital. On the male side great changes have been made, additional furniture having been placed in the wards.

Several handsome pieces of furniture have been made by patients, and have been placed in the galleries.

But little out-door work, beyond gardening, has been done, owing to the class of patients not being suited to heavy work.

On the female side I have had several losses among the attendants, all owing to their marrying.

Among the men, though I have a younger and better class than I had, they are not so satisfactory as the women, being more given to wander from one situation to another.

I have lost two old male attendants, who left with pensions, in consequence of age and infirmity ; one a very good man, developing epilepsy.

I discharged one man summarily, for roughness to a patient.

As to my colleagues and assistants in general, I can only repeat what I have said in former years, that they do their best to aid me in doing the Hospital good service.

And to the Treasurer and the Committee I must tender sincere thanks for their personal kindness and devotion to the interests of this great Charity.

I have the honour to be,

My Lords and Gentlemen,

Your obedient Servant,

GEO. H. SAVAGE, M.D.

February, 1883.

BETHLEM HOSPITAL,
May 16th, 1882.

Two members of our Board paid their official visit on August 23rd, 1881; since which date 97 males and 123 females have been admitted, and 63 men and 119 women discharged, 21 of the former and 72 of the latter had recovered, 8 men and 4 women died. Nothing in the causes of the deaths calls for notice in this respect, excepting the fact that 4 of the deaths are due to General Paralysis, and 1 of the patients died of Apoplexy whilst absent on leave. A patient here was attacked by Small-Pox and removed to the Hospital at Deptford at the end of last year; he recovered, and no other person in this Hospital caught the disease. Dr. SAVAGE was absent on his wedding tour, but we were accompanied by the Assistant Medical Officer during our visit, and we have seen all the patients on the books who are in residence. There are 116 men and 154 women, out of whom 24 of the former and 30 of the latter belong to the incurable class. There are absent, on what is termed here short leave, 2 men and 3 women; so only 241 patients have had opportunity of speaking with us this day. We shall at no distant date visit the Convalescent Home. The behaviour of the patients in either divisions was satisfactory, and we saw few patients who were inclined to be violent or abusive, whilst many patients expressed much satisfaction at the arrangements made for their care and treatment. Within the building, renovation and decoration is in progress, and we

were glad to learn that No. 2 Gallery is to be commenced immediately. Only 1 patient, a male, was in bed to-day, whilst under medical treatment the names of 14 men and 15 women. We gave to every patient desiring it a private interview, and held or endeavoured to hold a conversation with every one of the patients, but very many of those here are making rapid progress towards recovery, but we conclude that the more favourable cases are to be found at Witley. Several of the patients who left this Hospital have been transferred to other Institutions; but we find that one lady who was removed by transfer to Wonford House in February last has by an oversight not been entered in the Discharge book, or notice sent to our office. It seems that the Steward keeps the Discharge book, and is also considered to be responsible for the forwarding of the requisite notice to the Commissioners; but by the 54th sec. of 8th & 9th Vic., c. 100, the Superintendent of the Hospital is the person on whom this duty is imposed. About 20 patients go out on parole, either quite alone or two patients together. Three men have been secluded on ten occasions for a total of fifty-eight hours, and 5 women on thirty-five occasions for a total of one hundred and ninety-six hours. The attendants seem to be numerically sufficient and up to their work. One very desirable plan here is that all the attendants, besides their regular leave, have a sort of holiday for a fortnight every year at Witley. The dress of the patients was not very satisfactory, particularly in the male division. We think that some more stringent regulations might be made with respect to the provision of an adequate supply of suitable clothing for each patient on admission. Dinner was served whilst we were in the Wards; it consisted of fish, vegetables

and pudding. The food was good and neatly served. There is no lack of amusement for the patients. Another Lawn Tennis Ground is in course of construction; they are 6 in all, 2 asphalted and 4 grass. Church Service is attended by about 100 patients, and 10 or 12 more are able to go to Divine Worship beyond the walls. The beds and bedding were in good order and properly attended to. The Case books are as far as we examined them properly kept.

Signed, W. E. FRERE, } *Commissioners*
 ROBERT NAIRNE, } *in Lunacy.*

BETHLEM HOSPITAL,

September 26th, 1882.

We have much pleasure in stating that at this our second visit this year, we find the Hospital in good order everywhere, the beds and bedding well looked after, the patients quiet and orderly, and the Wards for the most part bright and cheerful. We wish, however, that something could be done to improve the appearance of the Gallery on the male side, where the worst cases are received. It compares by no means generally with the accommodation for the like class on the female side. The dress of the men in this Gallery also was not satisfactory, and we trust some means will be taken to ensure a due supply of clothes being provided by the friends before their reception here. On the male side no one was occupying the Infirmary, and some improvement has taken place with regard to the arrangements there by the removal of the Billiard Table from the room adjoining, and so affording a dining room for the Infirmary patients, who no longer now are obliged to take their meals in their sleeping room. Two women and 4 men were in bed as we passed through the Wards, and one of the men was also in seclusion. The patients under medical treatment are 15 men and 13 women, whilst since the last visit on May 16th, seclusion has been used in the case of 2 men three times for twelve hours in all, and in the case of 3 women on eight occasions for a total of fifty-six hours. Two women have been restrained only once for five hours, and the other 3 twice for twelve hours altogether. The changes since that date have been the admission of 48 men and 67 women, the discharge of 51 males and 56 females, 21 of the former and 33 of the latter are marked

as recovered. The deaths have been 5; 4 of whom were men, and 3 of them died from General Paralysis. The other death formed the subject of enquiry by the Coroner, and as there has been correspondence with our Board on the subject, we need not refer to it at length. The woman died of Phthisis. The number on the books to-day are 273—108 on the male and 165 in the female division; 24 and 29 respectively are on the incurable list. There are absent at Witley 9 men and 18 women, on leave 7 men and 9 women, and out for the day 1 man and 2 women. We have seen all the other patients, and had no complaint of any sort, excepting one or two very insane male patients said they were fit for discharge. The only subject of interest to note since our last visit is the fact that on the male side patients are admitted on payment, and there are to-day 10 patients here paying 2 guineas a week. This is the fixed price, and it is the only sum which can be taken from paying patients. We have made the usual enquiries and have no change to report in the amusements, means of exercise, or occupation afforded to the patients. Divine Worship is performed as heretofore. The staff of attendants continue to perform their duties in a satisfactory manner, and seem fit persons to have the care of the insane. We ought perhaps to say that the large number entered as absent at Witley is due to the fact that this is the day on which the change in the inmates of that House takes place, and so both those who left this morning to go thither, and those who will return here to-night, are of necessity entered in the patients' book as absent at the Convalescent Home at Witley.

Signed, W. E. FRERE, } *Commissioners*
 ROBERT NAIRNE, } *in Lunacy.*

BETHLEM CONVALESCENT HOSPITAL, WITLEY,

June 13th, 1882.

When we arrived here this morning, we found some nurses and patients had just come, and 3 patients and some nurses were going back. These 3 patients have so much benefitted by their residence here, that they are to be discharged recovered to-morrow. We have as usual gone over the whole House, and are glad to be able to report that since the last visit, hand fire engines with buckets have been placed on every floor. We have seen all the patients in residence—8 gentlemen and 19 ladies. We are so well aware of the advantage this Institution is in aiding the recovery of patients, that we desire to suggest how one extra bed at least might be provided on the male side, viz., by removing the lath and plaster partition between the two single rooms, and should at any time a single room be required, one of the attendants' rooms could be made available for that purpose. The garden was bright and cheerful, and the house was clean and in good order; but the walls are in great need of re-colouring, and we hope that this year it will be done. It is perhaps needless to remark that no patient here made any complaint, and nearly all acknowledged to have derived benefit from their residence here. The various amusements, walks and drives of the patients, remain as before described. So we have only in conclusion to express our satisfaction at the general arrangements of this excellent and useful adjunct to the Bethlem Royal Hospital.

Signed, W. E. FRERE, } *Commissioners*
 ROBERT NAIRNE, } *in Lunacy.*
